

Verified deforestation free

How does Bunge calculate the “verified deforestation free” percentage as reported on its palm oil dashboard?

- To consider volumes verified deforestation free, these volumes must come from a supplier that has submitted maps of all its concessions at group level to Bunge or companies from which Bunge is sourcing indirectly
- These concessions are actively monitored with optical and radar satellites for land use changes
- Deforestation free means no reported land use changes linked to deforestation
- Verified deforestation free volumes are taken as a percentage of total volumes sourced by Bunge
